COVER LETTER

Dear Sir/Madam,

I am writing this letter to express my interest in the job position of Senior UI/UX Designer. I read about the open job position on LinkedIn, and it immediately caught my attention.

I graduated as a computer science engineer at the University of Goce Delcev in Stip, Macedonia. I have got a degree of finishing Academy for UX/UI design, at Brainster international edtech organization in Skopje, where I acquired my beginner experience.

While studied at the academy I have gained experience in designed various applications and websites as part of the Academy's real project program with Brainster is coinnovation partners, in which we did research, analysis, problem-solving, from lo to Low-fidelity prototyping and brought the experience closer to a user with no understanding of what they need to delightful products that ensure adoption and seamless experience. Great achievements are always the result of great cooperation and team working. Working in a team was an important routine while I was working as a UX/UI designer and that helped me to develop my skills as a team player. I believe the general experience I have gained here will help me to be a more suitable and successful employee in your company.

As for the job position as UX/UI designer, I must say that I find it a lot tempting and challenging. Challenges are what is motivating me in life. I am always eager to learn new concepts, techniques, and software. My experience up to now presents me as a person able to adapt to a new working area, new work obligations and I assure you that one of my best characteristics is my ability for fast learning and gaining new skills with great ease.

While working on different projects, I have improved my previously basic knowledge of coding in HTML and CSS. As a result of working in a team, and having consistent communication with the developers, I have become better at using and understanding java scripts as well.

Although I'm a junior in UX/UI design, I believe that to succeed, one of the major aspects, as with all developers is passion and determination. I have a sense of design, interaction, and development and the ability and skills to work a challenging job like this. I would be happy and honored if I get the chance to improve my knowledge in a company like yours. I will not only do my job the best way possible but I will also enjoy doing it.

I would be very glad if you consider me as a reliable candidate for the job positions, and allow me to discuss further this.

I thank you in advance for reviewing my application and looking forward to hearing from you.

Sincerely,
Martina Dimitrov
